Welcome to the summit of business transformation. The foremost conference and exhibition dedicated to AI for the enterprise.

AI is transcending every area of business and society today, from global conglomerates to SMEs, from CIOs, to heads of functions, AI is fuelling operational and commercial evolution at a light-speed pace.

The AI Summit 2020 Series is here to guide you on your journey of business transformation whether you are initiating, implementing or optimising your AI projects. Supported by the technology leaders and global authorities, and through world-class business leaders, we give you unmitigated access to the information and tools that will bring your AI business plans to life.

The AI Summit London is not alone, just as AI is not the only technology businesses are working to harness. As the centrepiece to TechXLR8 – Europe’s most diverse technology exhibition – The AI Summit will take you through the complete tech journey with conferences focused on IoT; Cloud; Blockchain; Quantum and ARVR, while hosting their sector’s pioneering thought leaders.
NEW FOR 2020

VISIONAIRES LOUNGE
Available to the most senior decision makers, the VisionAIres Lounge is a first-class, exclusive environment for business leaders to cut out the noise of the expo and focus on the connections and interactions that matter. There will be Chatham House sessions and informal gatherings giving solution providers a unique and valuable opportunity.

INNOVATE ZONE
The new home for the bleeding edge of the space; the Innovate Zone is where you’ll find the latest demos, coolest robotics technology, high-growth start-up pitches, and presentations on the brand new Innovate Stage. Not to be missed!

ASK AN ANALYST SESSIONS
Need clarity on a new industry development? Get a better perspective on the partnerships and investments happening across international markets? Insight into a company strategy? This year, Tractica and Ovum – our in-house research and analyst firms – will be hosting dedicated drop-in sessions for our attendees to pick their brains on all this and more.

AN AUDIENCE WITH THE SPEAKER
An intimate setting of 30 delegates, An Audience With The Speaker, gives engaged and specific attendees the opportunity to spark conversation and debate across a host of topics with the industry thought leaders. These sessions have limited spaces – so please look out for the sign up sheet after registration!

TECH FOR GOOD
How is tech creating a better society? From healthcare and education to energy and the environment, the Tech For Good stage will host businesses and governments leveraging AI to make a genuine difference to society.

AI PROJECT LABS
As AI is developing so are the challenges in implementing it. AI Project Labs are 1-hour seminars of up to 30 attendees that allow delegates a unique opportunity to dive deep into specific topics or challenges and benchmark ideas against industry peers.

LONDON.THEAISUMMIT.COM #AISUMMIT

HEADLINE EVENT OF PART OF TechXLR8
The AI Summit London has been built to transport you through the road-mapping journey – from initiation to implementation, optimisation and innovation.
INITIATE STAGE

Hosting the tech heavyweights and global business leaders, the Initiate stage gives you the ideas and insights to spark your AI aspirations into life. Engage with CEOs of FTSE 100 businesses as well as the tech superstars to put your business in the best possible position to kick off your AI journey.

EARLY CONFIRMED SPEAKERS INCLUDE

No other AI for Business event gets CEOs to come and share their business' vision for the future and the strategic direction given from the very top of the largest organisations in the world.

THEMES

- Competing with industry disruption through tech
- Turning a brick and mortar business into an innovator
- Going beyond business: tech for the greater good
- Leading a company through digital transformation

JOB TITLES IN ATTENDANCE
IMPLEMENT
STAGE

Designed for business leads and senior strategists, the Implement stage gets down and dirty with the practicalities of AI for the enterprise in 2020. Legacy heavyweights and rising pioneers alike will break down top AI use-cases from inception to delivery and explore the translation to commercial success.

Whilst some sessions will go in depth on a particular product or solution, the focus will largely be on the actual implementation process and the associated obstacles/key considerations – looking at the ecosystem of the challenge as much as the actual technical solution for the challenge.

E A R L Y  C O N F I R M E D  S P E A K E R S  I N C L U D E

Alexandros Tzitzaras
Lead Data Scientist – Analytics Manager
Coca-Cola

Emma Stromfelt
Chief Digital Officer
AniCura

Joost van der Burgt
Senior Policy Advisor, Artificial Intelligence
De Nederlandsche Bank

THEMES

Designing and aligning organisational structures for AI

Overcoming technical and operational challenges when scaling POCs

Building a cross-functional sustainable data management strategy

Empowering your workforce with integrated ML platforms

JOB TITLES IN ATTENDANCE

GLOBAL HEAD OF LOGISTICS

MARKETING DIRECTOR

CUSTOMER SERVICES DIRECTOR

GLOBAL INNOVATION LEAD

DIRECTOR OF PARTNERSHIPS

HEAD OF ENGINEERING

TECHNICAL DIRECTOR

DIRECTOR OF AI

HEAD OF AI

HEADS OF BUSINESS INTELLIGENCE

DIRECTOR OF AI PRODUCTS
OPTIMISE STAGE

How can enterprises turbo-charge their AI projects? This is often the greater hurdle when it comes to AI. The Optimise stage will give practitioners deep dive, technical presentations and case studies uncovering the challenges of AI development and improvement.

Whilst the presentations are technical in content, each one sits within the context of Applied Enterprise AI. This isn’t software engineering or data science for the sake of it – each talk – and presenter – has genuine insights into the technicalities of AI deployment, and the methodologies required for success.

EARLY CONFIRMED SPEAKERS INCLUDE

Peter Ondruska
Head of Research
Lyft

Pardeep Bassi
Head of Data Science
LV= Technologies

Luis Vaquero

Join the top players in the market at the AI Media Summit to learn how AI is setting new paradigms across the content cycle – from production to management, monetisation, distribution and delivery.

**THEMES**
- Designing and aligning organisational structures for AI
- Overcoming technical and operational challenges when scaling POCs
- Building a cross-functional sustainable data management strategy
- Empowering your workforce with integrated ML platforms

Discover why everybody is talking about AI in finance – from commercial banking to insurance and investment, technologies such as RPA, NLP and ML are transforming internal processes and customer-facing activities alike. The Finance Summit is set to explore the most exciting AI use-cases from industry pioneers across the sector, delving into topics as varied as cybersecurity and customer personalization.

**THEMES**
- Augmenting process efficiency with RPA
- NLU/NLP deployment for personalized banking experiences
- Identifying and reacting to real-time insights powered by ML
- Threat detection and prevention

Bringing together both industry leaders and innovators, the AI Retail Summit with dive headfirst into the strategies and technologies setting the standard for transformation in the industry, from brick-and-mortar sites to the digital space.

**THEMES**
- Streamlining operations across the retail value chain
- Future-proofing brick-and-mortar
- Tools and strategies for next-gen ecommerce
- Enhanced multichannel customer engagement
Find out why AI is at the forefront of cutting-edge innovation in health and pharma – learn about trailblazing applications in disease diagnosis, drug discovery, patient care and more from the vanguard of the healthcare community.

Uncover why AI is instrumental for sales and marketing success as cross-industry experts share their solutions – whether it’s tailoring customer experience, supporting content generation, or enhancing sales strategy, there’s always room for better and faster.

AI implementation in manufacturing is at an inflection point. The huge swathes of data owned by industrial organisations is providing AI and machine learning adopters with limitless opportunities to deliver new products, new business models, and greater insights into their business. This brand-new stage will be dedicated to AI the predictive, efficient, and intelligent future of the manufacturing industry.

2019 SPEAKERS

TAKE A LOOK AT ALL CONFIRMED SPEAKERS FROM LAST YEAR
Patrick Hunger will address the changing landscape of modern business and the top-down approach organisations need to take when it comes to AI. Patrick will share his insights into how Saxo Bank have approached the technology and lessons learned along the way.

AI is built into nearly every Facebook product and service to benefit people by connecting them to what matters, powering new experiences, and helping keep the community safe. Drawing on examples like how AI is used to add captioning on videos so visually impaired people can better understand what’s on their News Feed; automatic translations to enable people around the world to communicate across language barriers; as well as power products such as Facebook Marketplace – Nicola shares clear, real world applications for AI and an exciting glimpse into what AI will make possible in the future.

Johnson & Johnson and Johnson have been leaders in digital transformation in pharma & healthcare. Stuart McGaugan as been integral to this transformation and at the AI Summit, Stuart will share his unique insight into how Johnson & Johnson have pioneered in implementing AI, bringing value to the business across a number of functions.

“AI is key but, at the same time, a very wide and rather complex domain. The AI Summit facilitates the tech’s movement through knowledge sharing discussions with peers and, of course, the discovery of all new AIs.”

Decision making is integral to the success of business but for the NHS it is a matter of life and death. Richard Corbridge of the NHS’s only 100% digital pathology trust gives remarkable insight into how LTHT has implemented AI and Machine Learning to both grade and predict pathology results, changing the way the hospital handles patients and treatments.

“AI is key but, at the same time, a very wide and rather complex domain. The AI Summit facilitates the tech’s movement through knowledge sharing discussions with peers and, of course, the discovery of all new AIs.”
